100% natural

All preserved products are 100% natural. They are natural plants that have been treated with a bio-degradable formula.

Preserved to last for years

Our unique process, developed with vegetable-based glycerin, replaces the humidity within the plant with a component that does not evaporate and thereby preserves beauty over time.

Cost-effective

Our preserved trees last for years and significantly lower the need for re-purchasing.

Easy to maintain and install

They do not require light or water. Landscaping expenses are saved in installation and maintenance.

Powerful addition to traditional solutions

The preserved products can be successfully combined with fresh or artificial plants for complete design freedom to generate different environments and effects.

Respectful with the environment

The preserved plants use none of the energy required for fresh cut flowers, saving water and reducing carbon emissions. The result is a significantly lower carbon footprint than fresh or artificial flowers. Help care for the environment. One plant at a time.

What are Verdissimo® preserved trees and plants not

They are not freeze dried (lyophilized) or dehydrated products

They are not growing

They are not artificial

They are not toxic

All our products are designed for daily contact with pets and people. They do not pose a health risk.

Preserved Nature since 1984

In Verdissimo our inspiration is the vision of our clients, always working to create balance between architecture, functionality and nature.

The natural preserved products create humanized and enjoyable living spaces which allow us to relax and be more creative.

They allow us to soften structural elements of architecture that may seem alien to us.

Bringing nature indoor adds a note of color and creates a unique space.

In areas with elevated noise, the Verdissimo preserved products are sound-absorbing and help create an acoustically pleasant environment.

Natural space dividers help define and customize the environment.

To remove dust, clean regularly with a dry or slightly damp cloth/duster or apply compressed air at low power and low temperature. Once free of dust, anti-static polish sprays with paraffin/wax base can be added.

- For indoor use only.
- Do not water.
- Avoid direct and prolonged exposure to sunlight.
- Avoid prolonged exposure to high humidity (greater than 80%).
- Avoid crushing, pressing or folding foliage or flowers.
